

# esm\_dis\_con

Points: observed. 1.6% fall outside the 95% region (orange); about 5% should.

Shaded: where the model puts 50, 80 and 95% of its predictive mass, from 200 draws. Points: the observed data, orange outside the 95% region. A systematic drift of the points off the regions means the trend is wrong; regions much wider or narrower than the scatter mean the variance is.
