

esm_neg3_bin, lag 1

Points: observed (4000 of 5191 shown). 0.7% fall outside the 95% region (orange); about 9% fall outside the 80% region (grey).

Rate of change against time, plotted at the midpoint of each interval and shaded by the 50, 80 and 95 predictive regions. A scatter that widens or narrows over time while the regions do not points at the diffusion rather than the drift.
